# Post-ASM Paediatric Sleep Course and Workshop

10 – 12 October 2011, Hong Kong SAR

Paediatric sleep medicine is a relatively new and rapidly developing subspecialty. Although books and references are widely available, only a few paediatricians and family physicians have the opportunities to get a proper exposure to a full range of paediatric sleep disorders. This course is open to all paediatricians, family physicians and adult sleep physicians who are interested in paediatric sleep medicine. We are excited to have a panel of distinguished local and overseas speakers to give us an up-to-date information on sleep related disorders in children. At the end of the course, participants will be expected to: i) gain an overview of current paediatric sleep medicine and management of common paediatric sleep disorders; ii) learn how polysomnography in children is performed; iii) be able to perform basic sleep staging and events scoring, under direct guidance from the world renowned experts through the workshops, lectures and hands-on workshops.
